ABSTRACTED-PUB-NO: SU 1791713A

BASIC-ABSTRACT:

The unit (1) for blow-through test is presented for attachment on frame (5) to one of a number of constricting units (3) carried on revolving turret (2) with motor (6), bearings (4), light disc (7) with optical signal pair (9,10).

Double-acting pistons and cylinders (8) automate all the test actions with electrohydraulic or pneumatic gear after selecting one of the units (3) and clamping it up. Light signal (9,10) controls stopping position.

ADVANTAGE - The automated selection system offers high output and cheaper working. Bul.4/30.1.93
